

Cable tray spring bolt specifications

Article Overview

Cable tray spring bolts are specialized fasteners designed for secure, adjustable attachment of cable trays, typically made from spring steel with defined load capacities and dimensional standards.

Material and Construction

Cable tray spring bolts are generally made from spring steel, which provides flexibility and resilience for repeated installation and adjustment without permanent deformation. The bolts are often zinc-plated or coated to resist corrosion in indoor environments, though they are not recommended for outdoor or highly corrosive conditions (Eaton B-Line series) .

Dimensions and Types

Spring bolts are available in various diameters and lengths to accommodate different cable tray sizes and strut systems. Common diameters include 3/8" and 1/2", with lengths selected based on the tray width and mounting requirements . The bolt head is typically designed to snap into channel slots or strut systems, allowing for quick installation and auto-height adjustment .

Load Capacity

The allowable load of a spring bolt depends on its material strength and installation configuration. Eaton B-Line catalogs specify that the load ratings apply to the fastener itself and do not account for the supporting structure, so proper engineerin...
