

Construction work resulted in the severing of the communication fiber optic cable

Overview

More often than not, the damage to a network is accidental and happens during construction work. There are countless cases of municipal workers damaging fiber while digging their way to a burst public water supply pipe or homeowners severing cables while installing a fence. In all seriousness, wildlife activity is among the leading causes of fiber optic cable cuts. As it happens in everyday life, rodents and insects are the most common culprits – particularly in more remote, forested areas. Luckily, there are several solutions available that can help prevent a newly. Because while they're perceived as the best and safer option in their product line, fiber optic cables still are fragile and can cause data outages when installed or treated incorrectly. Even worse, fiber optic repairs take weeks and require specialist equipment and skills. Physical damage to fiber optic cables manifests in various ways, with the most immediate being signal loss or complete signal failure, disrupting communication and data transfer.
