

# Data Center Solution Pricing

## Article Overview

Building a data center typically costs \$10 million to over \$100 million upfront, with annual operational costs ranging from \$10 million to \$25 million, depending on size, location, and infrastructure requirements.

### Capital Expenditures (CapEx)

**Construction and Infrastructure:** The initial cost of a data center includes land acquisition, site preparation, building construction, and installation of essential systems such as electrical, HVAC, and cooling infrastructure. Land can account for 15-20% of total costs, while outfitting the building represents 20-25%, and electrical systems alone can comprise 40-45% of construction expenses. HVAC and cooling systems typically add another 15-20% to the total build cost. Overall, construction costs vary widely based on location, labor rates, and regulatory requirements, with total CapEx ranging from \$10 million to over \$100 million for large-scale facilities .

**Hardware and Software:** Servers, storage units, networking equipment, and other hardware are major cost drivers, with typical lifespans of 3-5 years, necessitating regular upgrades. Software costs, including operating systems, virtualization platforms, security tools, and management software, can range from \$10,000 to \$100,000 annually for enterprise-scale deployments .

### Operational Expenditures (OpEx)

**Power and Cooling:** Data centers consume significantly more energy per square foot than standard commercial buildings, with energy costs heavily influenced by local electricity rates and cooling requirements. Efficient power usage and green energy...
