

Distribution box fixing screws

Article Overview

Distribution box fixing screws are specialized fasteners used to secure covers, panels, and internal components of electrical distribution boards, available in various sizes and materials for different applications.

Screw Specifications

Distribution box screws typically come in metric sizes such as M3, M4, M5, M6, and M8, with the choice depending on the load and component being secured . Common types include:

- M3 screws: Small diameter, ideal for fastening circuit boards, connecting wires, or small internal components. They are suitable when high load-bearing capacity is not required .
- M4 screws: Slightly larger, offering more strength and load-bearing capacity, often used for securing heavier components or panels .
- Materials:
 - Brass pan head screws: Corrosion-resistant, electrically conductive, and nonmagnetic, suitable for wet environments .
 - Alloy steel button head screws: Stronger than stainless steel, with black-oxide or zinc plating for corrosion resistance .
 - Stainless steel (18-8) screws: Chemically resistant, mildly magnetic, and passivated for added protection against oxidation .
