

Dust-free fiber optic connectors

Overview

A dust shutter fiber adapter is a device designed to align and connect the ends of fiber optic cables, while also protecting the internal fiber connections from environmental contaminants. For example: The efficiency of launching light into a fiber can be substantially degraded by dust particles, which may also be burned in by intense laser radiation. A beam. Dirty fiber connectors can break your network. Dust, oils, and residues cause signal loss, downtime, and costly repairs. This all-in-one system – comprising the FLX/DLC connector, FLX socket, and the FLX Field Installation Kit – is designed for quick deployment and. With fiber optics, the tolerance to dirt or contamination on the ends of the ferrules of a connector is near zero. Other contaminants are oils from skin (fingerprints), alcohol residue, and plastic particles from connector parts and even from the.
