

Electromagnetic relay protection for nuclear power plants

Overview

Two common types of protective relays used in the nuclear power industry are those of the GE IAC family and the ABB HU family. From retrofits and system modernization to next-generation projects, like advanced reactor installations, nuclear power generation demands solutions that are reliable. EPRI would like to acknowledge the nuclear plant system engineers, protective relaying subject experts, and members of the Transformer and Switchyard Users Group (TSUG) who participated in the survey. After analyzing the technology, architecture, and functional logic of a variety of relay protection setting calculation systems and combining the characteristics of the. Curtiss-Wright's Nuclear Division has partnered with Schweitzer Engineering Laboratories (SEL) to serve as a channel to market for SEL's line of digital protective relays and engineering services for Commercial Nuclear markets worldwide. Based in Pullman, Washington, Schweitzer Engineering.

Article Content

Technical Basis for Regulatory Guidance on Lightning Protection in ...

This report documents the technical basis for guidance on the protection of nuclear power structures and systems from direct lightning strikes and the resulting secondary effects.

ELECTROMAGNETIC COMPATIBILITY IN NUCLEAR POWER PLANTS

Operating envelopes characteristic of the electromagnetic environment in nuclear power plants have also been developed and serve as the basis for establishing acceptable testing levels.

Relay Protection Setting Calculation System for Nuclear

Nuclear power plants have a complex structure and changeable operation mode, which induces low setting calculation efficiency. After analyzing

Industry Practices Related to the Application of Protective Relaying ...

Electromechanical (E/M) type protective relays and SPDs are commonly used in one-out-of-one (1/1) logic schemes at nuclear power plants in the protection of large power transformers.

Analysis of Electromagnetic Risk in Nuclear Power Plant

With the application of 5G communication technology in the vertical industry, the electromagnetic interference and compatibility issues between newly introduced wireless communication devices and

Protective Relay Maintenance and Application Guide

APPROACH EPRI's Nuclear Maintenance Applications Center reviewed protective relay types and specific applications of these components in power generating station protective schemes, especially

Digital Protective Relays | Nuclear | Curtiss-Wright

SEL distribution protection solutions provide complete primary and backup protection from all types of faults. Using these devices helps you avoid expensive

Can Nuclear Power Plants Resist Attacks Of

The effects of an electromagnetic pulse are a real concern to our power grid, but new nuclear power plant designs can handle it, shown here as an

Electromagnetic Interference Incidents and Compatibility Assurance in ...

Publication Date: 2025/10/16 Abstract: Electromagnetic Compatibility (EMC) is a critical qualification parameter for safety-related Instrumentation and Control (I& C) systems in nuclear power plants

ORNLSR-20222534 Criteria for Determining the Safety of Wireless

Executive Summary This report provides an update on the latest technical information regarding the ability of Nuclear Power Plants (NPPs) to safely shut down after Electromagnetic Pulse (EMP)

GE IAC and ABB HU Transformer Protective Relays in

Two common types of protective relays used in the nuclear power industry are those of the GE IAC family and the ABB HU family. Knowledge of these relays is

DS430 final for publication

The design of the protective devices for electrical power systems and for components of nuclear power plants should also comply with national standards that apply to the safety of electrical equipment and

Research on Electromagnetic Interference Protection of Nuclear Power ...

Considering the high requirement of electromagnetic compatibility (EMC) in nuclear power environment, it is urgent to further study the electromagnetic interference and protection

Regulatory Guide 1.180, Guidelines for Evaluating Electromagnetic

Section 50.55a(h) of 10 CFR Part 50 states that protection systems must meet the requirements of the Institute of Electrical and Electronics Engineers (IEEE) standard (Std) 603-1991, "Criteria for Safety

Protective Relaying

This chapter deals with the principal design criteria, design features, and testing requirements for the protection of Class 1E power systems and equipment supplied from those systems.

Relay Protection Setting Calculation System for Nuclear Power Plant ...

The relay protection setting calculation system of nuclear power plants based on B/S architecture and cloud computing is a platform for relay protection setting calculation and...

Framatome Digital Protection Relay Upgrades for

We are now providing SEL digital relays to the nuclear industry through a robust qualification and Commercial Grade Dedication (CGD) program. Replacement of

Framatome Digital Protection Relay Upgrades for

Framatome and electrical protection industry leader Schweitzer Engineering Laboratories (SEL) are teaming together to bring qualified protection solutions for

PROTECTIVE RELAY SELECTION

ABSTRACT This CBT is a self-paced, detailed, comprehensive, nuclear industry generic overview of the design and licensing basis for protective relay selection and set point considerations. This course

Study probes risks to power plants from electromagnetic

Researchers at the Department of Energy's Oak Ridge National Laboratory have been leading a project to understand how a high-altitude

Power System Protective Relays: Principles & Practices

This presentation reviews the established principles and the advanced aspects of the selection and application of protective relays in the overall protection system, multifunctional numerical devices

Protective Relaying | part of Electrical Systems for Nuclear Power ...

Abstract: This chapter deals with the principal design criteria, design features, and testing requirements for the protection of Class 1E power systems and equipment supplied from those systems.

Modernizing Nuclear Power Facilities with Digital

Discover how today's digital protective relays outperform legacy electromechanical systems in reliability, diagnostics, and overall availability. Modern digital

ELECTROMAGNETIC COMPATIBILITY IN NUCLEAR POWER PLANTS*

ABSTRACT Electromagnetic compatibility (EMC) has long been a key element of qualification for mission critical instrumentation and control (I&C) systems used by the U.S. military. The potential for
