

Fiber optic heat shrink tubing 100 pieces self-operated

Article Overview

A 100-piece pack of fiber optic heat shrink tubing provides durable, moisture-resistant protection for spliced fiber optic cables, ensuring long-term network stability and easy self-operated installation.

Product Overview

Fiber optic heat shrink tubing is designed to protect spliced fiber optic joints from mechanical stress, moisture, and dust while maintaining signal integrity. A typical 100-piece pack includes tubes made from cross-linked polyolefin or polyolefin combined with 304 stainless steel reinforcement, offering high durability, temperature resistance, and mechanical strength during fusion splicing .

Key Features

- **Material and Durability:** Tubes are made from polyolefin with stainless steel rods or PE material, providing excellent heat resistance and long service life .
- **Hot Melt Adhesive Lining:** Many tubes feature a hot melt adhesive lining that seals the splice against moisture and dust, enhancing network reliability .
- **Dimensions:** Standard tubes are typically 60mm in length, with inner diameters around 1.3mm and outer diameters around 2.6mm, suitable for most fiber optic splicing applications .
- **Sealing and Locking:** Some designs include locking ends to prevent steel pins from falling off and ensure a secure connection
