

Fiber optic internet router cannot connect to the internet

Article Overview

A fiber optic router may fail to connect due to power issues, faulty cables, misconfigurations, or ISP outages, and systematic troubleshooting can restore connectivity.

Step 1: Check Power and Connections

Ensure that both your router and optical network terminal (ONT) are powered on and connected securely. Verify that the AC adapters are plugged into reliable power sources and that all Ethernet or fiber cables are firmly connected to the correct ports (WAN to modem/ONT, LAN to devices) without visible damage or fraying .

Step 2: Inspect Fiber Cables and Connectors

Fiber optic cables are sensitive to bends, cuts, or dirt. Inspect the cables for sharp bends or visible damage and clean connectors using lint-free wipes and isopropyl alcohol if necessary . Dirty or loose connectors are a common cause of signal loss.

Step 3: Restart Devices

Power cycle your ONT, modem, and router. Unplug all devices, wait 30-60 seconds, then plug in the ONT first, followed by the router. Wait for all indicator lights to stabilize before testing connectivity
