

Field Operation and Maintenance of Relay Protection

Overview

Relay maintenance generally consists of : Inspection and burnishing of contacts. Adjustments checking (iv) Breakers tripped by manual contact closing. Protective circuit functional testing, including lockout relay testing, must take place immediately upon installation, every 2 years thereafter, and upon any change in wiring. If applicable, documentation is required detailing how verified protection segments overlap to ensure there is not a gap. GRANT NUMBER 4. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) 8. Most frequently they are performed by simulating test. PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS. This paper presents some general procedures for the proper inspection, testing, and start-up of critical, but often overlooked, electrical items in substations and medium voltage switchgear commonly found in petro-chemical facilities.
