

Fozor cable tray not showing

Article Overview

Cable trays may not display due to view range, annotation scale, or family loading issues in Revit or Dynamo.

Common Causes

- View Range and Plan Regions Cable trays running above the current view range may not appear in plan or reflected ceiling plan (RCP) views. Plan regions work in plan views but often do not display correctly in RCP views. Adjusting the view range or creating a dedicated plan view for the cable tray can resolve this issue .
- Annotation Scale Settings If the cable tray or its fittings are not visible, check the "Use Annotation Scale" property. Turning this off in the Properties dialog can make the family display correctly in plan views .
- Family Loading and Category Newly created or imported cable tray fittings may not appear if they are not properly loaded. Ensure the fittings are loaded into the project, and if necessary, temporarily change their category to Electrical Equipment, load them, then revert to Cable Tray Fittings .
- Dynamo Node Input When using Dynamo to create cable trays, ensure that the node receives an element type rather than a string. Incorrect input types can prevent the cable tray from displaying .

Recommended Steps

- Verify that the cable tray is within the view range of the plan or RCP. If it is above, either adjust the view range or create a separate overlay view for the tray .
- Select the cable tray or fitting family, open the Properties dialog, and turn off "Use Annotation Scale" .
- Load all necessary cable tray fittings into the project. Use the "Load Family" optio...
