

High-density mesh cable tray IP68 in stock

Article Overview

High-density wire mesh cable trays provide ventilated, flexible support for data, control, and power cables, but IP68-rated options are specialized and may require direct supplier confirmation.

Overview of High-Density Wire Mesh Cable Trays

Wire mesh cable trays, also known as basket trays, are designed to support small-diameter and high-density cabling while allowing airflow to prevent heat buildup and reduce cable wear (). Key features include:

- Ventilated mesh design: Promotes cooling and prevents heat damage to cables.
- Flexible installation: Straight sections can be cut, bent, or joined with splice connectors to create curves, slopes, and tees.
- Safety edges: Smooth edges reduce the risk of cable abrasion or injury during installation.
- Material options: Carbon steel, 304 or 316 stainless steel, and powder-coated finishes for corrosion resistance and durability.
- High-density support: Optimized grid patterns and heavy-duty wire gauges accommodate dense cable bundles without sagging.

IP68 Considerations

IP68 rating indicates complete protection against dust ingress and long-term immer...
