

How to install wires in an indoor electrical distribution box

Article Overview

To safely connect wires to an indoor distribution box, first turn off power, identify all conductors, and connect phase, neutral, and earth wires to the appropriate terminals following proper sequence and safety standards.

Safety First

Before touching any wires, shut off power at the main service panel and verify with a non-contact voltage tester that all wires are de-energized to prevent electric shock or fire hazards. Always wear insulated gloves and use tools rated for electrical work .

Identify Components

A typical indoor distribution box contains:

- Main Circuit Breaker (MCB) – controls overall power input.
- Residual Current Device (RCCB) – protects against leakage currents.
- Single-Pole or Double-Pole MCBs – protect individual circuits.
- Neutral Link – distributes neutral to all output circuits.
- Earth Link – connects all grounding wires .

Wire Preparation

- Strip insulation from wire ends carefully without damaging the conductor.
- Identify wires by color: black/red for phase (live), white/gray for neutral, green/bar...
