

How to make a cable tray using a cable tray cover

Article Overview

Cable tray covers can be used to enclose and protect cables, but building a complete cable tray requires combining side panels, end panels, and supports with the cover for a secure and functional system.

Understanding Cable Tray Covers

Cable tray covers, also called lids or lidding sections, are designed to enclose the top of a cable tray, protecting cables from dust, moisture, and mechanical damage while maintaining compliance with safety standards like NEC 392.6 . Covers come in various designs, including dome-shaped (hat-shaped) and flat tray covers, and can be made from metal, composite, PVC, fiberglass, or stainless steel depending on environmental and load requirements . Material choice affects corrosion resistance, weight, and durability, with stainless steel and composites being popular for industrial applications .

Building a Cable Tray Using Covers

- **Plan and Measure:** Determine the tray dimensions based on the number and size of cables, available space, and any obstacles. Sketch a layout to visualize the tray and cover placement .
- **Select Materials:** Choose sturdy materials for the tray base and sides, such as metal or reinforced plastic, and select a compatible cover material that fits securely over the tray .
- **Assemble the Tray:** Connect side panels to the base using screws or brackets, the...
