

How to set up a router with fiber optic ports

Article Overview

To set up a router with a fiber optic connection, you need an Optical Network Terminal (ONT), a fiber-ready router, and proper Ethernet connections to bridge the optical signal to your home network.

Required Equipment

- Optical Network Terminal (ONT): Converts the incoming fiber optic light signals into electrical signals your router can use. Typically provided by your ISP .
- Fiber-ready Router: Ensure your router supports fiber input, either via a dedicated WAN port or an SFP/SFP+ module for multi-gigabit speeds .
- Fiber Optic Cable: Usually single-mode with SC/APC or SC/UPC connectors, provided by your ISP .
- Ethernet Cable: Cat6a or higher is recommended to maintain high-speed performance between the ONT and router .
- Power Cables: For both the ONT and router.

Step-by-Step Setup

1. Install the ONT

- Locate the fiber wall outlet where the ISP's fiber line enters your home.
- Connect the fiber optic cable from the wall outlet to the ONT's optical port, handling the connector carefully to avoid dirt or damage
