

Huawei 40G Optical Port Switch

Article Overview

Huawei 40G switches are enterprise-grade managed Ethernet switches with QSFP+ ports, designed for high-bandwidth data center and enterprise network deployments.

Overview

Huawei 40G switches, such as those in the CloudEngine (CE) and S-series portfolios, support at least one 40 Gigabit Ethernet (40GbE) interface via QSFP+ ports, which can use either optical transceivers or direct attach copper (DAC) cables. These switches are intended for enterprise LAN cores, data center top-of-rack (ToR) deployments, AI/ML clusters, and high-density virtualization environments, rather than small office or SMB applications.

Key Use Cases

- Data center spine-leaf fabrics: 40G links serve as inter-switch links (ISLs) between leaf and spine layers to prevent oversubscription.
- AI/ML cluster interconnects: High-throughput connections for GPU servers and NVIDIA DGX systems, supporting NCCL-based all-reduce traffic.
- High-density virtualization: Aggregating multiple VMs per host with storage-over-Ethernet traffic and VM migration.
- Media production networks: Real-time 4K/8K video editing and storage workflows requiring low-latency, lossless transfer.
