

Installation location of fiber optic cable junction box for pole line

Overview

Typically, the joint box is installed on the inner side of the iron tower, ideally at a height between 8 and 10 meters above the ground. This placement not only provides uniformity along the line but also protects the fibers from environmental exposure while ensuring easy access for. OPGW cable joint box installation involves several key stages: selecting the appropriate location, preparing both the cable and the joint box, splicing fibers, and sealing the joint box properly. Adhering to these steps ensures optimal performance and longevity of the telecommunications system. Deploying fiber above ground on poles or towers removes the need for underground digging and is particularly useful when the ground is uneven, rocky or both. Fiber in a duct solutions have a major aesthetic. Choosing the right location for your fiber optic junction box is crucial. During installation, all curvatures should be smooth.
