

Instructions for use of 1200mm deep cold aisle rack

Article Overview

A 1200mm deep cold aisle rack should be installed in a modular cold aisle containment system, ensuring proper alignment, sealing, and airflow management to maximize cooling efficiency and safety.

Installation and Assembly

- **Rack Alignment:** Position the racks in a hot aisle/cold aisle layout, ensuring that the cold aisle is fully enclosed between rows of IT cabinets or network cabinets . The racks should be aligned precisely to prevent airflow leakage.
- **Containment Panels:** Install overhead ceiling panels and side panels to enclose the cold aisle. For 1200mm wide racks, use modular top panels with a total width of 1200-1305mm and a height of approximately 300mm above the cabinet top . Panels are typically made of cold-rolled steel with a thickness of $\geq 1.2\text{mm}$ for stability and security.
- **Doors:** Attach front and rear doors to the containment. Sliding doors on rails with nylon silent pulleys are recommended for smooth operation, while hinged or swing doors improve safety and emergency exit access . Doors should have transparent monitoring windows and may include automatic closing devices.
- **Sealing Gaps:** Apply foam strips or sealing material around the perimeter of the containment to prevent cold and hot air from mixing . Ensure all screws and fasteners are tightened securely to maintain structural integrity.
- **Integration with IT Equipment:** Most IT equipment draws air from the front and exhausts at the rear. Ensure that rear fan panels or exhaust channels direct hot air into the hot aisle, maintaining separation from the cold aisle
