

LED distribution box model

Article Overview

LED distribution boxes come in various models designed for indoor/outdoor displays, high-power LED screens, and quick-installation lighting setups, offering features like overload protection, intelligent control, and parallel connections.

Types of LED Distribution Boxes

1. **Power Distribution Boxes for LED Displays** These boxes are designed to manage power for large LED screens, both indoor and outdoor. They support AC380V input and output 220V to the LED modules. Key features include air switch protection, short-circuit and overload protection, leakage prevention, and power indicator lights. Some models offer PLC programmable control for remote power-on and intelligent management, while others include multi-function cards for time switches and additional safety functions .

2. **Parallel Connection Distribution Boxes** Used for LED strips or luminaires, these boxes allow easy parallel connections without stripping wires. Conductors are inserted and connected by simple pressing, making them suitable for lighting designers and architects who need quick and safe installation .

3. **Quick-Installation LED Distribution Boxes** These models, such as terminalLED® boxes, are ideal for LED spotlights in kitchens, furniture, or trade show booths. They allow series and parallel connections of up to 70 LEDs under 150V, enabling fast and safe installation with minimal preparation .
