

Lc fiber optic network cable combo panel

Article Overview

An LC fiber optic combo panel is a high-density patch panel that facilitates backbone-to-backbone or backbone-to-horizontal fiber connections using LC connectors, often supporting MPO/MTP breakout cables for scalable network deployment.

Overview

LC (Lucent Connector) fiber optic panels are designed to manage high-density fiber connections in data centers, enterprise networks, and telecom installations. LC connectors use a 1.25 mm ferrule, allowing compact port spacing and enabling more connections per rack unit compared to larger SC connectors . Combo panels often integrate pre-loaded LC adapters and support duplex LC connections, providing a flexible interface for both single-mode (SMF) and multi-mode (MMF) fiber networks .

Key Features

- **High Port Density:** Panels can accommodate up to 72 LC duplex connectors in 1RU, with options for 2RU or 3RU for larger deployments .
- **MPO/MTP Compatibility:** Many panels support MPO12-to-LC breakout cables, enabling rapid conversion from trunk to individual LC connections for high-speed applications (10 Gbps to 400 Gbps) and scalable network growth .
- **Versatile Deployment:** Suitable for Top of Rack (ToR), Middle of Rack (MoR), and End of Row (EoR) layouts, providing flexibility in data center design .
- **Cable Management:** Integrated trays, sleeves, and labeling options ensure organized routing and reduce signal loss or connector damage .
- **Durability and Compliance:** Panels are often tested to Telcordia GR-449, GR-63, G...
