

Lida Level 3 Distribution Box

Article Overview

The Lida Level 3 Distribution Box is a robust electrical enclosure designed for final junctions in a three-level distribution system, providing safety, durability, and flexible installation options.

Overview and Purpose

The Level 3 distribution box refers to the final junction box in a three-level electrical distribution system, typically installed under the main and secondary distribution boxes. It is used to connect individual electrical appliances and circuits, often incorporating leakage protection switches to ensure safety for each connected device . This setup is particularly suitable for construction sites, industrial applications, and large-scale projects, where a structured, multi-level protection system is required .

Construction and Materials

Lida Level 3 distribution boxes are manufactured by Yueqing City Lida Locks Company, using zinc alloy or stainless steel for durability and corrosion resistance. The boxes often feature a chromium-plated finish to extend lifespan and maintain appearance in demanding environments . They are designed to be compact, secure, and compatible with standard electrical enclosures, allowing easy installation and management. Single key operation simplifies access control, and the boxes can be customized in terms of size, color, logo, and material to meet specific project requirements .
