

Lx is how many kilometers of optical module

Overview

LX - Long Wavelength — LX fiber optic transceivers operate in the 1310 nanometer long-wavelength range, transmitting data over single-mode fiber, typically supporting transmission distances of up to 10 kilometers. It operates at a 1310nm wavelength and is widely used in enterprise, campus, and access networks where copper cabling or short-reach multimode optics are no. The maximum distance that a LX (Long-Reach) Small Form-Factor Pluggable (SFP) module can reach depends on the specific type of LX module you are using. The LX SFP module is commonly used in fiber. Long-distance variants, typically referred to as LX, EX, ZX, or ER/LR SFPs, are engineered with higher optical power budgets and longer wavelength lasers (e. It is standardized under IEEE 802. This module, which operates at a wavelength of 1310nm, is essential for linking network.
