

New type of temporary power distribution box

Article Overview

Modern temporary power distribution boxes now feature adjustable outputs, modular designs, and enhanced safety for versatile, short-term power needs.

Overview

Temporary power distribution boxes, also known as spider boxes, are portable units designed to distribute electricity from a main source to multiple devices. Unlike permanent installations, these boxes are highly mobile, easy to set up, and essential for construction sites, events, emergency operations, and maintenance projects. They provide multiple outlets, protective devices, and ensure safe operation under temporary conditions.

Innovations in New Models

- **Adjustable Output Boxes** The Load Master™ Series introduces adjustable current ratings for outputs, allowing users to match specific application loads. These boxes feature 1, 3, or 4 adjustable circuit breakers with varying amperage and voltage ratings, making them ideal for dynamic, temporary applications. Their compact, space-saving design supports easy transport, storage, and in-use operation.
- **Explosion-Proof and Rugged Designs** For industrial or hazardous environments, new boxes are explosion-proof, containing internal sparks and heat to prevent ignition of flammable gases or dust. These units use heavier enclosures, precision flame paths, corrosion-resistant alloys, and high-grade polymers, and are certified to ATEX and IECEx standards, ensuring safety in extreme conditions
