

Price of high-quality busbar trunking in Western Europe

Article Overview

High-quality busbar trunking in Western Europe typically ranges from €50 to €500 per meter, depending on material, current rating, and system complexity.

Pricing Overview

The cost of busbar trunking systems varies significantly based on conductor material, insulation type, and power rating. Copper busbars are the most expensive due to their high conductivity and durability, while aluminum options are more cost-effective but slightly less efficient. Insulated or sandwich-type busbar trunking systems add to manufacturing complexity, increasing the price. For high-quality industrial or commercial applications, prices generally fall between €50 and €500 per meter, with higher-end systems designed for high-current, modular, or digital-integrated applications reaching the upper range.

Factors Affecting Cost

- **Material:** Copper is the premium choice, followed by aluminum and bi-metallic options.
- **Current Rating:** Systems rated for higher amperage (e.g., 630A to 5000A) cost more due to larger cross-sections and additional safety features.
- **Insulation and Design:** Sandwich or air-insulated systems, modular designs, and tap-off units increase labor and material costs.
- **Customization:** Custom lengths, bends, joints, and embedded digital meters for predictive maintenance add to the price
