

Professional-grade fiber optic cable attachment tools

Article Overview

Professional fiber optic tools include strippers, cleavers, crimpers, insertion/extraction tools, polishing kits, and testing equipment designed for precise cable termination and maintenance.

Core Fiber Optic Tools

Strippers and Thermal Strippers: Tools like the JIC-125 Fiber Optic Stripper remove buffer coatings to expose the optical fiber, while thermal strippers such as the TSAB-40 can handle baked-on coatings and fluoroacrylate undercoating, supporting fiber cladding diameters from 30 μm to 1000 μm and buffer diameters up to 1200 μm . **Cleavers:** Precision fiber cleavers, such as the FC-220, provide clean, accurate fiber cuts essential for low-loss splicing and connectorization. **Crimpers and Connector Tools:** Professional-grade crimpers and insertion/extraction tools allow secure attachment and removal of fiber optic connectors, ensuring reliable connections without damaging the fiber. **Polishing and Termination Kits:** Termination kits include pin and socket polishing tools, jacket strippers, shears, and scribes, enabling field or lab technicians to complete precise fiber terminations. Wet and dry polishing options are available for different connector types. **Mid-Span Access Tools:** Tools like the MS-446 Mid Span Slit & Ring Tool provide quick access to interior fibers in thick-walled cables, facilitating splicing or testing without full cable stripping.

Testing and Inspection Equipment...
