

Roof Distribution Box

Article Overview

A roof distribution box is a weatherproof electrical enclosure designed to safely house and distribute electrical connections on rooftops or outdoor installations.

Overview

A roof distribution box serves as a junction point between the main electrical supply and the consumer installation, protecting wiring and components from environmental factors such as rain, dust, and UV exposure . These boxes are commonly used in residential, commercial, and industrial rooftop setups, including solar panel systems, outdoor lighting, and telecommunications equipment .

Types and Materials

- **Plastic Distribution Boxes:** Made from UV-resistant polyester, these boxes are fully insulated (protection class II) and suitable for outdoor use. They often include terminals for cable feedthroughs or built-in fuse devices .
- **Metal Distribution Boxes:** Typically flush-mounted with a metal frame and door, these boxes offer higher mechanical protection (IK07) and moderate protection against dust and moisture (IP40). They are modular and interlinkable, allowing expansion for larger electrical systems .

Key Features

- **Weatherproofing:** Designed to prevent water ingress and withstand outdoor conditions, often rated with IP codes (e.g., IP40) for dust and moisture resistance
