

Steel for cable tray support

Article Overview

Steel is the primary material for cable tray supports, typically low-carbon or stainless steel, often galvanized or coated for corrosion resistance.

Types of Steel

Cable tray supports are generally made from low-carbon steel or stainless steel. Low-carbon steel is commonly used for its strength and ease of fabrication, while stainless steel is preferred in environments requiring higher corrosion resistance, such as chemical plants or outdoor installations .

Steel Finishes and Corrosion Protection

To enhance durability, steel supports are often treated with protective coatings:

- Pre-galvanized steel (ASTM A653M, coating G90 or G60) provides basic corrosion resistance .
- Hot-dip galvanized steel (ASTM A123 or BS EN ISO 1461:2009) offers superior protection, especially for outdoor or humid environments .
- Custom coatings can be applied depending on environmental conditions or aesthetic requirements .

Structural Considerations

Steel support elements include wall brackets, suspended supports, center suspensions, and C-channel frames. These components are designed to carry the w...
