

Telecom Router for Mobile Fiber Optic Cable

Article Overview

To connect a telecom router to a fiber optic internet connection, you need an Optical Network Terminal (ONT) or compatible SFP module, a fiber-compatible router, and an Ethernet link between the ONT and router.

Required Equipment

- **Optical Network Terminal (ONT):** Converts fiber optic light signals into electrical signals your router can use. Provided by your ISP and installed near the fiber entry point in your home or office .
- **Fiber-Compatible Router:** Ensure your router supports fiber input, either via an integrated fiber modem or an SFP module. For Telekom fiber, routers like the AVM FRITZ!Box 5530 Fiber (for XGS-PON) or other SFP-compatible models are recommended .
- **Fiber Optic Cable:** Typically a thin yellow cable with SC/APC or SC/UPC connectors .
- **Ethernet Cable:** Connects the ONT to the router's WAN port for data transmission .

Step-by-Step Setup

- **Install the ONT:** Connect the fiber optic cable from the wall outlet to the ONT and power it on. Wait for the status lights to stabilize (usually 2-5 minutes), .
- **Connect ONT to Router:** Use a high-quality Ethernet cable (CAT6 or better) to link the ONT's LAN port to the router's WAN port .
- **Power On and Configure Router:** Turn on the router and follow the manufacturer's instructions to configure network settings. Modern routers often support auto-configuration and remote management for ease of setup
