

The optical module pull ring was pulled out

Overview

The solution is to unplug the fiber and reinsert it into the SFP module interface until a “click” sound is heard, indicating the fiber connector and SFP module are properly connected. When installing a CFP optical module, hold the screw rods with both hands, and slightly pull out the optical module from the optical port. The QSFP-DD. The following table lists common abnormal phenomena and solutions during the installation of optical modules: II. Key Considerations: Preventing Problems Before They Occur 1. Dust prevention and cleaning: Details determine success or failure 1) Unused protection: When an optical module is not in. These faults can be identified and located through visual inspection and the built-in DDM function of the optical module. However, locating the fault does not always mean it can be resolved—if the hardware is damaged, the issue can only be fixed by replacing the module.
