

Three-level distribution box portable

Article Overview

A three-level portable distribution box is a mobile, waterproof power distribution unit with integrated leakage protection, designed for temporary outdoor or industrial use.

Key Features

Portability and Design: These boxes are designed for easy transport, often featuring foldable carrying handles and compact, stackable enclosures for convenient movement and storage . Some models weigh up to 100 kg and can be positioned using cranes if necessary . **Safety and Protection:** They include leakage protection that can disconnect power within 0.1 seconds, preventing electrical hazards. The enclosures are made from high-strength flame-retardant materials and impact-resistant plastics, often rated IP66 or IP67, making them suitable for outdoor and wet environments . **Three-Level Distribution:** The “three-level” design allows for organized power distribution across multiple circuits, supporting various equipment simultaneously. This structure improves efficiency and safety on construction sites, events, or temporary installations . **Sockets and Connectivity:** Equipped with five-hole sockets with larger spacing for better conductivity, these boxes ensure firm connections that are resistant to loosening. Pre-connected internal cables allow for plug-and-play operation, reducing setup time . **Durability:** The boxes are built to withstand heavy impacts, moisture, and rough handling. Some models feature thickened steel parts and baking varnish finishes for long-term stability .

Applications

- **Construction Sites:** Temporary power supply for tools and machinery....
