

Uganda Electrical Cable Tray Specifications

Article Overview

Electrical cable trays in Uganda are primarily steel-based, modular systems designed for safe, organized, and durable cable management, compliant with IEC 61537 and DIN 4102-12 standards.

Types and Materials

Cable trays in Uganda are available in solid or perforated sheet metal, steel, and sometimes stainless steel or GRP/FRP materials for specialized applications . Steel trays are often galvanized or powder-coated to resist corrosion, making them suitable for both indoor and outdoor installations . Common types include:

- Ladder trays for heavy-duty cable support
- Solid-bottom trays for dust-sensitive environments
- Perforated trays for ventilation and heat dissipation
- Trunking systems for enclosed cable routing

Dimensions and Load Capacity

Standard dimensions vary depending on the manufacturer and project requirements. For example, a typical tray may measure 100mm x 25mm, but custom sizes are available . Steel trays are designed to support multiple cables, including heavy-duty power and data cables, ensuring mechanical strength and long-term durability
