

View all wwn numbers for Huijue fiber optic switches

Article Overview

WWN numbers for Huijue fiber optic switches can be retrieved using switch commands or bulk WWN lookup tools, as they are factory-set identifiers unique to each switch.

Using Switch Commands

Most enterprise-class fiber optic switches, including Huijue devices, assign a 64-bit WWN to each switch or chassis. This WWN is factory-set and cannot be changed by the end user. To view it, you typically use a command similar to `show wwn` or `switchshow` depending on the switch OS. This command displays the WWN along with the factory serial number and may also show the 24-bit Fibre Channel address used for communication. On Huijue switches, you can access the management interface (CLI or web GUI) and look for the WWN under system or chassis information.

Bulk WWN Lookup

If you have multiple switches, you can use bulk WWN lookup tools. For example, WintelGuy.com provides a tool where you can paste a list of WWNs or output from commands like `switchshow` to retrieve vendor and device information. This is useful for auditing or inventory purposes when managing many Huijue switches.
