

What is used to represent a terminal box

Overview

In a flowchart, the terminal box is used to indicate the start and end points of the process. It is typically represented by an oval or rounded rectangle shape. The start point signifies where the process begins, while the end point indicates where the process concludes. It uses shapes (symbols) like rectangles, ovals, diamonds, and arrows to depict steps, decisions, inputs/outputs, and the sequence or flow between them. What is the use of Terminal box?
