

What router should I use for a 20M fiber optic connection at home

Article Overview

For a 20 Mbps fiber connection, a mid-range Wi-Fi 5 or Wi-Fi 6 router with good coverage and at least 4 LAN ports is sufficient.

Recommended Router Features

For a 20 Mbps fiber connection, you do not need a high-end Wi-Fi 7 or multi-gig router, as your internet speed is well below the maximum capacity of most modern routers. Focus on these features:

- **Wi-Fi Standard:** Wi-Fi 5 (802.11ac) is sufficient, but Wi-Fi 6 (802.11ax) offers better performance for multiple devices and future-proofing .
- **LAN Ports:** At least 4 Ethernet ports for wired devices like PCs, smart TVs, or gaming consoles .
- **Coverage:** Choose a router with sufficient range for your home size. Dual-band routers (2.4 GHz + 5 GHz) are usually enough for small to medium homes .
- **Security:** WPA3 support and basic firewall features help protect your network .

Recommended Models

- **TP-Link Archer AX55** – A Wi-Fi 6 router that balances price and performance, ideal for small to medium homes. It supports multiple devices efficiently and provides stable speeds for streaming and browsing .
- **TP-Link Archer AX21 (AX1800)** – Offers dual-band Wi-Fi 6, Beamforming, and MU-MIMO for smooth performance across multiple devices. It is budget-friendly and suff...
