

Which router can connect to fiber optic cable

Article Overview

Routers compatible with fiber optic internet are those that support multi-gigabit speeds, have Gigabit Ethernet ports, and are designed to handle high-bandwidth connections.

Key Features to Look For

When choosing a router for fiber optic internet, consider the following:

- **Gigabit or Multi-Gig Ethernet Ports:** Ensure the router has at least one Gigabit WAN port to connect to your fiber modem or ONT. Some routers offer 2.5G or 10G ports for multi-gig fiber plans, allowing full utilization of high-speed connections .
- **Wi-Fi Standards:** Look for routers supporting Wi-Fi 6 (802.11ax) or Wi-Fi 7 for faster wireless speeds and better performance across multiple devices .
- **Dual-Band or Tri-Band Support:** Routers with 2.4GHz and 5GHz bands (or an additional 6GHz band in Wi-Fi 7) reduce interference and improve performance in congested areas .
- **Coverage and Performance:** Consider routers with strong signal range and advanced features like beamforming to ensure stable connectivity throughout your home or office .
- **Security Features:** Built-in security like AiProtection or NETGEAR Armor helps protect your network from malware and unauthorized access .
